Lung Pre-Transplant Nurse Coordinator

Our LUNG PRE-TRANSPLANT NURSE COORDINATORS are health care professionals responsible for the continuum of care experienced by the transplant patient at the University of Washington Medical Center located in Seattle. The role focuses on the duties related to the pre-transplantation phase and will include procurement call. Management for a designated transplant patient population includes independent patient assessment, triage, education, coordination of medical and nursing care, and documentation of care. Integral to the role is an understanding of the regulations and data requirements surrounding transplant care issued from the United Network of Organ Sharing and HRSA.

Our Lung Transplant service is one of the largest programs in North America. We provide lung transplant care for the entire Pacific Northwest. We are proud to provide this uniquely specialized care to patients in this region. Through the dedicated work of our team, patient survival and quality of life are superior. The Nurse Coordinators play a key role in this team effort.

As a Magnet recognized organization, the University of Washington Medical Center recognizes the contribution of nursing to high quality patient care, values professional nursing practice, promotes ongoing development of nursing staff, encourages autonomy and innovation, and supports interdisciplinary collaboration.

Position requires at least 2 years ICU nursing experience; transplant experience, BSN preferred.
